GRP SLIDING DOOR

**KK 24-12
 34-215**

GRP SLIDING DOOR

APPROPRIATION

GRP sliding door is designed for closing the passageways from the open deck to wheelhouse accommodations on all floating units.

EXECUTION

The door-frame is made of angle bar thick. 4 mm and is a stiff frame . Top part of frame forms special welded cross-bar which is also stiffened by gussets . A sill is made of flat bar finally welded to ship's deck. Brass T-bar is bolted to this sill and it is also a door – leaf guide during sliding one.

All the door – frame is suitable for bolting to steel wall which out of plumb of 16° on height 980 mm. A gasket around clear light is mounted in order to prevent against a water leakage to internal accommodations .

The door – leaf have a sandwich construction . It is filled with rigid polyurethane foam . The door – leaf is equipped with lock , cylinder and window with toughened glass pane thick. 12 mm . This panel is mounted by double – sided stainless steel frame. Screws for mounting a glass pane at the window are on the side opposite to front one.

The door-leaf is hanged on two trucks sliding it self in stainless steel guide . The door – leaf adheres to the gasket bolted on vertical part of the door – frame from lock side during closing it.

Bottom edge of the door-leaf is slided along the length of brass tee-bar. The rollers adjoin directly to this T-bar and their maintenance can be done through two inspection holes.

The door is equipped with 6 catches which give possibility pressing the door-leaf to the gasket on all circuit in closed position . It ensures a full tightness of the door.

DELIVERY RANG

Delivery comprises the complete door without cylinder .

PACKING , TRANSPORT , STORAGE

The door is protected against mechanical damages . Placed on special pallet can be displaced by means of the trucks and the cranes . They must be stored in roofed accommodations .
